

# SUPPRESSORS

## DELTA P Machine Gun Suppression Technology

Introducing the world's first Multiplex Suppressor™ with QuickDrain™ technology. Delta P suppressors eclipse conventional design and fabrication technology to meet the full range of NATO suppressor requirements. The Delta P line-up reliably suppresses machine guns from the MP7 to the M2 BMG. The high volume of gas is processed forward, maintaining the bolt velocity and cyclic rate within specifications, and keeping excess gas toxicity out of the operator's face.

## Benefits

- World's first multiplex suppressor™
- Comprehensive signature reduction for machine guns
- Revolutionary DMLS technology for a parts count of 1
- Patented QuickDrain™ technology rapidly processes and drains the propellant gasses to ambient before the bolt opens, preventing blow-back and over-speed of the weapon
