

TRUE SWITCH

6.8TVC M240 Switch Barrel – 6.8TVC has 2x range and is 30% lighter than 7.62x51

True Velocity designed the 6.8 TCV cartridge to work with the current and qualified 7.62x51 NATO M13 link. The True Velocity 6.8mm conversion kit requires a mere barrel swap to convert any MAG 58 or M240 machine gun to fire the 6.8 TVC cartridge. An operator can complete the entire conversion process in fewer than 10 seconds due to the quick-change nature of the M240 barrel. The True Velocity conversion kit is compatible with all models of the M240, to include the M240B, M240C, aircraft versions, and ground vehicle weapons. The kit has no adverse impact on reliability, durability, or function upon the weapon.

- Higher velocity with safe operating pressures
- “Bullnose” cartridge design optimized for durability
- Performance advantages over metallic cartridges
- Meets full military temperature range: –60°F to 160°F
- Decreased chance of cook-off due to insulating properties of polymer
- Polymer reduces weight by 30% & reduces heat transfer to the chamber
- System integration minimized weapon signature & suppressor size / weight
- Steel case head enables improved safety over brass & permits magnetic retrieval of spent cases
